

DENT WIZARD

- Customer name:* Steve Faulkner, Dent Wizard (part of Manheim Defleet Services)
- Location:* Smart Repair facility at Manheim Auction Centre, Colchester
- Application:* Smart Repairs and Alloy wheel refurbishment
- Reason for installation:* To replace existing ineffective local extraction units
- STL equipment installed:* Two off STL Smart repair bays, one with an increased height to accommodate vans, and a dedicated Wheel SprayOut cabin
- Project overview:* Having viewed a similar installation at Inchcape Automotive (now a part of Camden Ventures Ltd), Steve Faulkner recognised the advances that could be made in terms of finish quality, productivity and on site Health and Safety with the STL Smart Repair Bay.

The Smart Repair Bay creates a brightly lit and filtered clean air environment for carrying out localised repairs, with weighted flame-retardant curtain walls that simply draw back when the unit is not in use.

The installation included a Wheel SprayOut cabin, cost effective solution for alloy wheel refurbishment, consisting a 2m x 2m extract chest, framed by a double-skinned steel panel enclosure, complete with shelving to accommodate four wheels simultaneously

Smart Repair Bay installation (one with increased height option)
