

WESTOVER GROUP, POOLE AND SALISBURY

WESTOVER GROUP CHOOSES SPRAYBOOTH TECHNOLOGY LIMITED

Westover Group has recently completed installation of two state-of-the-art STL Cyclone II spraybooths at its new 10,000 sq ft body repair centre in Poole.

Jason Milton, Bodycare Centre Manager, said, "We chose STL because of the confidence they gave us. Their pricing was competitive, the booths well specified, and in particular, they were prepared to sit down and listen to us. They then demonstrated the flexibility to give us what we wanted, rather than what they thought we should have.

"We'd had no prior relationship with STL, but I knew we'd made the right decision as soon as the project and installation teams started," adds Jason, "They were extremely professional throughout and nothing was too much trouble."

The Cyclone II is a high efficiency spraybooth designed specifically to meet the demands of the busy, modern bodyshop, and features STL's unique air-cooled pod lighting system, which offers light levels in excess of 1400lux without encroaching upon roof space, making STL the only UK manufacturer able to offer true wall-to-wall roof filtration, keeping all-important clearance times to a minimum.

Service back up and support is important to Jason, and STL has a nationwide team of Corgi registered engineers providing proactive maintenance, repair and breakdown cover. "Our local service engineer is a credit to STL, he has been very attentive, and clearly knows his trade."

So impressed was Jason with the work carried out at Poole, he had no hesitation in asking STL to carry out a similar installation at Westovers Salisbury site.

The Bodycare Centre has recently achieved prestigious Jaguar and Land Rover Category B accreditations, in addition to Nissan, Toyota, Alfa Romeo, Skoda, Lexus, Morgan and Lotus.
